

Week 12 - Lab assignment:

In this assignment you will perform topic modeling using Latent Dirichlet Allocation (LDA) on a dataset of Quora questions and visualize the word cloud for one of the identified topics. For this project you will be working with a dataset of over 400,000 quora questions that have no labeled category and attempting to find 20 categories to assign these questions to.

Steps:

1. Importing Libraries and Data
2. Creating Document-Term Matrix (DTM) using TfidfVectorizer
3. LDA Model Building
4. Displaying Top Words for Each Topic
5. Assigning Topics to Questions
6. Generating Word Cloud for a Specific Topic
7. Plotting the word cloud using Matplotlib

Import pandas, WordCloud, and matplotlib

```
In [131... import pandas as pd
from wordcloud import WordCloud
import matplotlib.pyplot as plt
```

Load the dataset: quora_questions.csv file into a variable called: quora

```
In [133... quora = pd.read_csv("quora_questions.csv")
```

Display the head

```
In [ ]: print(quora.head())
```

Notice how we don't have the topic of the articles, so let's use LDA to attempt to figure out clusters of the articles.

Preprocessing

Use TF-IDF Vectorization to create a vectorized document term matrix.

Note: in the example number 2, we used "CountVectorizer" and for this lab, we are using: TfidfVectorizer

```
import TfidfVectorizer
```

```
In [89]: from sklearn.feature_extraction.text import TfidfVectorizer
```

max_df : float in range [0.0, 1.0] or int, default=1.0

When building the vocabulary ignore terms that have a document frequency strictly higher than the given threshold (corpus-specific stop words). If float, the parameter represents a proportion of documents, integer absolute counts. This parameter is ignored if vocabulary is not None.

min_df : float in range [0.0, 1.0] or int, default=1

When building the vocabulary ignore terms that have a document frequency strictly lower than the given threshold. This value is also called cut-off in the literature. If float, the parameter represents a proportion of documents, integer absolute counts. This parameter is ignored if vocabulary is not None.

create a vectorized document term matrix using TfidfVectorizer(max_df=0.95, min_df=2, stop_words='english') and call it: tfidf

```
In [93]: tfidf_vectorizer = TfidfVectorizer(max_df=0.95, min_df=2, stop_words='english')
```

create a document term matrix dtm using tfidf.fit_transform

```
In [96]: dtm = tfidf_vectorizer.fit_transform(quora['Question'])
```

LDA

import LatentDirichletAllocation

```
In [102... from sklearn.decomposition import LatentDirichletAllocation
```

create and instance of a LDA with 20 expected components and use random_state=42

```
In [110... lda = LatentDirichletAllocation(n_components=20, random_state=42)
from sklearn.feature_extraction.text import TfidfVectorizer
```

fit the model (dtm)

```
In [108... lda.fit(dtm)
```

```
Out[108... LatentDirichletAllocation
LatentDirichletAllocation(n_components=20, random_state=42)
```

Using a for loop, print out the top 15 most common words for each of the 20 topics.

```
In [116... lda.fit(dtm)

if hasattr(lda, 'components_'):

    words = tfidf_vectorizer.get_feature_names_out()

    for topic_idx, topic in enumerate(lda.components_):

        top_words_idx = topic.argsort()[-15:][::-1]

        top_words = [words[i] for i in top_words_idx]
        print(f"Topic #{topic_idx + 1}: {' '.join(top_words)}")
else:
    print("The LDA model has not been fit properly.")
```

Topic #1: best, marketing, digital, social, service, does, development, company, sydney, media, friends, web, heard, source, good

Topic #2: word, english, tips, sentence, porn, god, speak, does, making, process, interview, used, best, addiction, doctor

Topic #3: education, successful, alcohol, center, india, does, structure, drug, good, gst, best, county, spotify, rehab, actor

Topic #4: quora, questions, people, iphone, mind, answers, tv, exist, know, don, facts, big, series, asked, interesting

Topic #5: culture, different, does, india, jobs, best, value, differences, address, companies, difference, car, types, corporate, australia

Topic #6: war, world, pakistan, india, math, relationship, does, china, did, country, russia, distance, long, win, like

Topic #7: weight, lose, best, meaning, places, visit, days, day, live, period, pregnant, place, gain, sleep, life

Topic #8: trump, improve, donald, president, clinton, english, hillary, skills, win, election, writing, presidential, best, vote, 2016

Topic #9: phone, android, app, love, mobile, use, whatsapp, best, snapchat, does, iphone, data, number, internet, free

Topic #10: increase, important, height, does, age, love, happy, fall, dream, people, iq, looking, rich, life, known

Topic #11: things, new, energy, know, employees, day, going, universe, windows, effects, created, resolution, 2017, apps, year

Topic #12: engineering, job, science, best, engineer, computer, difference, mechanical, career, student, software, university, college, good, mba

Topic #13: learn, best, programming, language, books, account, learning, read, book, password, hack, java, way, start, python

Topic #14: instagram, card, best, facebook, friend, game, hotel, laptop, police, credit, tell, know, worst, likes, crush

Topic #15: earth, does, light, think, speed, chinese, people, com, human, matter, japanese, faster, picture, flat, force

Topic #16: money, quora, make, best, online, question, movies, earn, questions, ask, website, answer, youtube, business, way

Topic #17: 500, notes, 1000, prepare, exam, rs, modi, rupee, indian, best, india, black, preparation, money, cat

Topic #18: travel, life, time, die, parents, possible, thing, depression, moment, biggest, does, want, living, smoking, water

Topic #19: women, hair, men, rid, sex, fat, eat, girls, best, does, reduce, grow, guys, belly, body

Topic #20: does, feel, like, favorite, girl, mean, stop, sex, boyfriend, girlfriend, guy, good, love, woman, time

Add a new column to the original quora dataframe that labels each question into one of the 20 topic categories.

```
In [180... topic_distribution = lda.transform(dtm)

topic_labels = topic_distribution.argmax(axis=1)

quora['Topic_Label'] = topic_labels

print(quora.head())
